

A prehistoric park. A modern command center.

Identity foundation for operations, park management, and guest experience.

Brand promise

Understand the park. Protect its inhabitants. Deliver an extraordinary visit.

Personality

Capable • observant •
adventurous

Understated humor in the name;
precise language in the product.

Identity & logo usage

Use the primary artwork consistently while production variants are developed.

Primary lockup

Amber claw emblem and fossil ivory wordmark. Prefer a solid deep navy field for predictable legibility. Preserve the original proportions.

Spacing & size

Leave clear space of at least half the emblem height around the lockup. For initial use, keep the full logo at least 240 px wide and check it at its actual display size.

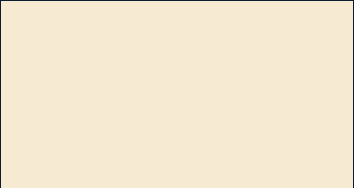

Avoid

Do not stretch, recolor, rotate, crop, or add effects. Do not place on busy photography. Keep operational badges and labels outside the logo's clear space.

Asset status: generated raster concept, not vector master artwork. Transparency and edge quality should be checked before integration. A compact icon and light-surface variant remain to be designed.

Color system

Park identity is stable. Interface status must remain unmistakable.

				
Deep Navy	Charcoal	Fossil Ivory	Amber	Slate
#0B1C2C	#17232E	#F6EBD2	#F2AD24	#ACBAC6
Brand field	Panel direction	Brand lettering	Brand accent	Secondary detail

Operational semantics

Normal: green + check icon

Warning: amber + warning icon

Critical: red + critical icon

Unknown / stale: neutral + explicit label

Implementation rule

Hex values are brand reference colors. Use semantic Capra tokens for UI surfaces, text, controls, and states. Let the Cribl shell select light or dark mode; retain contrast in both.

Typography, imagery & voice

Professional facility signage meets a clear, compact operator interface.

Typography

Use Capra's configured font stack for the app. Use sentence case for labels and headings. Reserve uppercase for the logo and short facility identifiers. Use tabular numerals for metrics.

Imagery & map language

Use restrained dinosaur silhouettes and simple facility icons. Build schematic maps with labeled zones, route lines, and asset markers. Keep photography outside analytical panels.

Type hierarchy

Page title: 28-32 px
Section heading: 18-20 px
Body and controls: 14-16 px
Supporting labels: 12-13 px
Primary metrics: 28-40 px, with visible units

Product voice

State condition, location, and consequence.
Example: 'East enclosure fence voltage low. Safari route restricted.'
Keep jokes out of critical alerts. Explain fictional compatibility rules in plain language.

Control room design rules

One connected park model across operational and guest-facing outcomes.

Overview composition

Lead with critical incidents, animals needing attention, attraction availability, guest occupancy, queue waits, and tour readiness. Place the park map beside a prioritized incident list.

Compatibility results

Compatible / Conditional / Incompatible / Insufficient data. Explain environmental overlap, behavior, capacity, and containment rules. Label these as fictional simulation rules.

Asset investigation

Show asset ID, location, status, last update, readings, units, acceptable ranges, and recent trends. Link to affected enclosures, attractions, tours, and infrastructure.

Interaction & accessibility

Use text and icons alongside color. Preserve keyboard focus and readable contrast. Acknowledged is separate from resolved. Show stale data as unknown and Demo Mode persistently.
